OVERVIEW

Who Does What?

👑 ADMIN

1. **Configures the league**
   Teams, budgets, player pools
2. **Imports players**
   Uploads a CSV with player names & pools
3. **Runs the auction**
   Puts players up one by one
4. **Manages live bidding**
   Pause, hammer, mark unsold

🏏 TEAM OWNER

1. **Logs in with team credentials**
   Name & password given by admin
2. **Watches the live auction**
   Sees current player, timer & bids
3. **Places bids**
   Tap the Bid button to raise the price
4. **Tracks their squad & budget**
   See roster in the sidebar

👑 ADMIN

STEP 1

League Setup

Go to **Admin Panel → League Setup tab**. Configure everything before importing players.

Global Settings

Number of Teams | Squad Size | Starting Budget | Min Bid

Teams

Add one row per team. Set a **team name** and **password** — share these with each team owner so they can log in.

Player Pools

Players are grouped into pools by skill tier (A1, A2 … D). Each pool has a **base price** and a **count**.

⚠️ The total player count across all pools must equal **Teams × Squad Size**.

EXAMPLE VALIDATION

✓ Pool total is 180 = 10 × 18 ✓

💡 The Save button only enables when pool total and team count both match your global settings.

👑 ADMIN

STEP 2

Import Players

Go to **Auction Controls tab → Import Players**. Players are uploaded via a CSV file.

1. **Download the CSV template**
   Click "⬇ CSV Template" — it pre-fills the pool column for you
2. **Fill in player names**
   Open in Excel or Google Sheets, add a name to each row
3. **Upload the CSV**
   Drag & drop or browse to the file
4. **Players are imported**
   Server validates counts and assigns base prices automatically

CSV FORMAT

```
name,pool
Virat Kohli,A1
Rohit Sharma,A1
MS Dhoni,A2
Hardik Pandya,A2
...
```

⚠️ Player count per pool must exactly match the pool config — the server will reject the file if they don't match.

👑 ADMIN

STEP 3

Auction Settings

Tune settings in the **Settings tab** before starting. These can be adjusted mid-auction too.

⏱️

Timer

How many seconds each player gets. Default: **30s**

⬆️

Bid Increment

How much each standard bid raises the price. Default: **500 pts**

🔔

Bid Bump

Seconds added to timer when a new bid comes in. Default: **+10s**

✅

Bid Confirmation

When enabled, teams see a confirm dialog before each bid registers — prevents accidental taps.

⏱️ Timer Mode

When the countdown hits zero, the player is **automatically sold** to the highest bidder (or marked unsold if no bids).

Best for fast-paced auctions.

🔨 Manual Mode

Timer is advisory only. When it hits zero, **admin clicks Hammer** to close the sale. Admin can also hammer early.

Best for controlled auctions.

👑 ADMIN

STEP 4

Running the Auction

- **Click ▶ Next Player**
  Puts the next pending player up for auction. Timer starts immediately.
- **Teams bid in real time**
  All participants see the player, timer, and current bid update live.
- **Pause if needed**
  Use ⏸ Pause to freeze the timer. ▶ Resume to continue.
- **Player is sold or unsold**
  Auto on timer expiry (Timer mode) or via 🔨 Hammer (Manual mode).
- **Repeat for next player**
  Click ▶ Next Player again. Continue until all players are done.

ADMIN CONTROLS PANEL

▶ Next Player ⏸ Pause
🔨 Hammer ✕ Mark Unsold
↩ Rollback Last Sale

ON BLOCK

Virat Kohli [A1]
Base price: 4,500 pts

Current bid: 7,000 pts
Leading: Team Alpha
Timer: 12s

💡 If a sale was settled incorrectly, use **Rollback Last Sale** — the player returns to the pool and the team's budget is refunded.

🏏 TEAM OWNER

BIDDING

How Teams Bid

1. **Log in**
   Use the team name and password the admin gave you

2. **Wait for a player to go up**
   Player card, timer, and current bid appear automatically

3. **Tap Bid or enter a custom amount**
   Each tap raises by the increment. Or type any higher amount for strategic bidding.

4. **Win or lose**
   Highest bidder when timer ends (or admin hammers) wins the player

```
TEAM VIEW

Rohit Sharma [A1]
Base: 4,000 pts
──────────────────
Current bid: 6,500 pts
Leading: Team Blaze 🔥
Timer: 08s
──────────────────
[ BID — 7,000 pts ] [ Custom: ____ ]

Your budget: 38,500 pts
Your squad: 3 / 18
```

Budget constraint

The Bid button auto-disables if bidding would leave you unable to fill your remaining squad slots at minimum bid. You can never overbid.

👑 ADMIN

MANAGING EDGE CASES

Handling Special Situations

❌ No bids received

If no team bids before the timer expires, the player is automatically marked **Unsold** (Timer mode) or admin uses Mark Unsold (Manual mode).

↩ Re-auction with price override

In **Auction Controls** → **Unsold Players**, click **Re-Auction**. An inline editor appears — adjust the base price if needed, then Confirm to re-queue.

⏸ Pause for discussion

Use the Pause button to freeze the timer mid-bid — useful if there's a dispute or technical issue. Resume continues from where it left off.

↩ Rollback last sale

In **Auction Controls**, click **Rollback Last Sale** to undo the most recent transaction — player returns to the pool and the team's budget is refunded.

⚠️ Don't redeploy or restart the server mid-auction without downloading a **State JSON** backup first (Settings tab → ⬇ Export State).

WRAP UP

End of Auction

Once all players are sold or unsold, the auction enters **Ended** state.

📊

⬇ Results CSV

Downloads a spreadsheet with every player — pool, base price, status, which team bought them, and for how much.

👥

Teams & Rosters tab

View each team's full squad and remaining budget. Good for a final review with all participants.

RESULTS CSV PREVIEW

```
Player Name,Pool,Base Price,Status,Sold To,Price
Virat Kohli,A1,4500,SOLD,Team Alpha,9000
Rohit Sharma,A1,4000,SOLD,Team Blaze,7500
Player XYZ,D,1000,UNSOLD,,
```

⚠ Reset Auction

Clears all bids and resets team budgets, but **keeps your league config and player list**. Use this to re-run the same auction.

🗑 Full Reset

Wipes **everything** — players, teams, config — back to factory defaults. Requires admin password. Use with caution.
