OVERVIEW

Who Does What?

👑 ADMIN

1. **Configures the league**
   Teams, budgets, player pools
2. **Imports players**
   Uploads a CSV with player names & pools
3. **Runs the auction**
   Puts players up one by one
4. **Manages live bidding**
   Pause, hammer, mark unsold

🏏 TEAM OWNER

1. **Logs in with team credentials**
   Name & password given by admin
2. **Watches the live auction**
   Sees current player, timer & bids
3. **Places bids**
   Tap the Bid button to raise the price
4. **Tracks their squad & budget**
   See roster in the sidebar

👑 ADMIN

STEP 1

League Setup

Go to **Admin Panel → League Setup tab**. Configure everything before importing players.

Global Settings

Number of Teams | Squad Size | Starting Budget | Min Bid

Teams

Add one row per team. Set a **team name** and **password** — share these with each team owner so they can log in.

Player Pools

Players are grouped into pools by skill tier (A1, A2 … D). Each pool has a **base price** and a **count**.

⚠️ The total player count across all pools must equal **Teams × Squad Size**.

EXAMPLE VALIDATION

✓ Pool total is 180 = 10 × 18 ✓

💡 The Save button only enables when pool total and team count both match your global settings.

👑 ADMIN

STEP 2

Import Players

Go to **Auction Controls tab → Import Players**. Players are uploaded via a CSV file.

1. **Download the CSV template**
   Click "⬇ CSV Template" — it pre-fills the pool column for you
2. **Fill in player names**
   Open in Excel or Google Sheets, add a name to each row
3. **Upload the CSV**
   Drag & drop or browse to the file
4. **Players are imported**
   Server validates counts and assigns base prices automatically

CSV FORMAT

```
name,pool
Virat Kohli,A1
Rohit Sharma,A1
MS Dhoni,A2
Hardik Pandya,A2
...
```

⚠️ Player count per pool must exactly match the pool config — the server will reject the file if they don't match.

👑 ADMIN

STEP 3

Auction Settings

Before starting, tune the live auction settings in **Auction Controls tab**.

⏱️

Timer

How many seconds each player gets. Default: **30s**

⬆️

Bid Increment

How much each bid raises the price. Default: **500 pts**

🔔

Bid Bump

Seconds added to timer when a bid comes in. Default: **+10s**

⏱️ Timer Mode

When the countdown hits zero, the player is **automatically sold** to the highest bidder (or marked unsold if no bids).

Best for fast-paced auctions.

🔨 Manual Mode

Timer is advisory only. When it hits zero, **admin clicks Hammer** to close the sale. Admin can also hammer early.

Best for controlled auctions.

👑 ADMIN

STEP 4

Running the Auction

Click ▶ Next Player
Puts the next pending player up for auction. Timer starts immediately.

Teams bid in real time
All participants see the player, timer, and current bid update live.

Pause if needed
Use ⏸ Pause to freeze the timer. ▶ Resume to continue.

Player is sold or unsold
Auto on timer expiry (Timer mode) or via 🔨 Hammer (Manual mode).

Repeat for next player
Click ▶ Next Player again. Continue until all players are done.

ADMIN CONTROLS PANEL

▶ Next Player ⏸ Pause
🔨 Hammer ✕ Mark Unsold

ON BLOCK

Virat Kohli [A1]
Base price: 4,500 pts

Current bid: 7,000 pts
Leading: Team Alpha
Timer: 12s

💡 Mark a player unsold manually at any time, and re-auction them later from the Unsold Players list.

🏏 TEAM OWNER

BIDDING

How Teams Bid

1. **Log in**
   Use the team name and password the admin gave you

2. **Wait for a player to go up**
   Player card, timer, and current bid appear automatically

3. **Tap the Bid button**
   Each tap raises the bid by the increment amount

4. **Win or lose**
   Highest bidder when timer ends (or admin hammers) wins the player

TEAM VIEW

Rohit Sharma [A1]
Base: 4,000 pts

Current bid: 6,500 pts
Leading: Team Blaze 🔥
Timer: 08s

[BID — 7,000 pts]

Your budget: 38,500 pts
Your squad: 3 / 18

Budget constraint
The Bid button auto-disables if bidding would leave you unable to fill your remaining squad slots at minimum bid. You can never overbid.

👑 ADMIN

MANAGING EDGE CASES

Handling Special Situations

❌ No bids received

If no team bids before the timer expires, the player is automatically marked **Unsold** (Timer mode) or admin uses Mark Unsold (Manual mode).

↩ Re-auction a player

In **Auction Controls** → **Unsold Players**, click **Re-auction** next to any unsold player to put them back in the pool.

⏸ Pause for discussion

Use the Pause button to freeze the timer mid-bid — useful if there's a dispute or technical issue. Resume continues from where it left off.

💾 Save your state

Use ⬇ **State JSON** to download a full backup of the auction at any point. If the server restarts, state is auto-restored from disk.

⚠️ Don't redeploy or restart the server mid-auction without downloading a State JSON backup first.

WRAP UP

End of Auction

Once all players are sold or unsold, the auction enters **Ended** state.

📊

⬇ Results CSV

Downloads a spreadsheet with every player — pool, base price, status, which team bought them, and for how much.

👥

Teams & Rosters tab

View each team's full squad and remaining budget. Good for a final review with all participants.

RESULTS CSV PREVIEW

```
Player Name,Pool,Base Price,Status,Sold To,Price
Virat Kohli,A1,4500,SOLD,Team Alpha,9000
Rohit Sharma,A1,4000,SOLD,Team Blaze,7500
Player XYZ,D,1000,UNSOLD,,
```

💡 To run another auction, click ⚠ **Reset Auction** — it clears all bids and resets team budgets, but keeps your league config and player list intact.
