Robbinsville Premier League

Real-time IPL-style player auction platform for local leagues

- Real-time Bidding
- Multi-device
- 10 Teams · 180 Players

10	180	8	18	50K	500	30s
TEAMS	PLAYERS	PLAYER POOLS	SQUAD SIZE	STARTING BUDGET	BID INCREMENT	TIMER

HIGHLIGHTS

Server-Authoritative Real-Time

All bids and timers are controlled server-side via **Socket.io**. Every participant sees the exact same state instantly — no polling, no drift.

Two Auction End Modes

Switch between **Auto Timer** (player sells when countdown hits zero) and **Manual Hammer** (admin decides exactly when to close each sale).

ADMIN FEATURES

League Configuration

Set number of teams, squad size, starting budget, and minimum bid. All configurable before the auction begins.

Custom Player Pools

Define pools (A1, A2, B1 ... D) with individual **base prices** and **player counts**. Add or remove pools freely.

Team Management

Create teams with custom names and passwords. Credentials are shared with team owners to log in on their devices.

CSV Player Import

Download a pre-filled CSV template, add player names, and upload. Server validates counts per pool automatically.

Auction Controls

Next Player, Pause, Resume, Mark Unsold — full control over the auction flow from a single admin panel.

Re-Auction Players

Any unsold player can be re-queued at any time. Admin can **override the base price** before re-

auctioning — just edit the value and confirm.

Configurable Timer

Set the countdown duration per player. A **bid bump** automatically adds seconds when a new bid comes in.

Results Export

Download a CSV of all players — sold price, team, pool, and status — for post-auction records and announcements.

State Backup & Restore

Export full auction state as JSON at any time. Auto-restored from disk on server restart — never lose progress.

Rollback Last Sale

Made a mistake? Instantly undo the most recent sale — player returns to the pool and the team's budget is fully refunded.

Bid Confirmation

Optional setting that shows a confirm dialog before each bid registers — reduces accidental taps in high-pressure moments.

Live Dashboard

PIN-protected spectator dashboard shows live standings, rosters, and budgets — great for a projector or second screen.

TEAM FEATURES

Any Device

Works on phones, tablets, and laptops. No app install needed — just a browser.

Live Auction View

See the current player, countdown timer, highest bid, and bid history update in real time.

Smart Bid Button

One-tap bidding at the set increment. Auto-disabled if you can't afford it or your squad is full.

Custom Bid Amount

Enter any amount above the current bid — not just the increment. Useful for aggressive or strategic bidding.

Squad & Budget Tracker

Live sidebar shows your roster, remaining budget, and how many slots are left to fill.

RULES & GUARDRAILS

Budget Enforcement

Server blocks any bid that would leave a team unable to fill remaining squad slots at minimum bid price.

No Self-Outbidding

Teams cannot bid when they are already the highest bidder. Prevents accidental double-bids.

JWT Authentication

Every session is secured with a signed token. Team credentials are isolated — teams only see their own data.

LOGIN ROLES

Admin

Full access — league setup, auction controls, player import, exports, reset

Team Owner

Bidding view — live auction, bid button, squad tracker, bid history

Spectator-ready

Any screen can show the live auction view — great for a projector display
